

CDN oriented system monitoring and service analytics

Celerity CDN Analytics is the solution that monitor and analyze the performance and status of the CDN system. The solution offers real-time status of service and system resources, and detects the issues for troubleshoot, also tracks the history and patterns of the service usage via web-based UI console.

The solution is designed for scalability, integration, and a high level of configurations to fit CDN infrastructure. Not only it offers overall information for the infrastructure, but also prevents disasters and failures by alarms and notifications.

With CDN analytics, the platform operators can prepare, plan, and budget for future upgrades by knowing how CDN works.

BENEFITS

- All-in-One monitoring solution for entire CDN infrastructure
- Real-Time monitoring for system status, service traffic, server resource, and more
- Insightful service analysis with intuitive interface
- Customizable graphical dashboard and detailed analysis based on RestFul API

■ TECHNICAL SPECIFICATION

| ITEM | | DESCRIPTION |
|----------|------------------|--|
| Hardware | Admin | <ul style="list-style-type: none">• Xeon silver 4208 2p 16c• 32GB MEM (16G x 2)• HDD 15k 600GB x 2ea (for OS, raid1)• NIC Onboard 1Gb eth 4p x 2ea |
| | DB | <ul style="list-style-type: none">• Xeon silver 4210 2p 20c• 256GB MEM (32G x 8)• HDD 15k 600GB x 2ea (for OS, raid1)• NIC Onboard 1Gb eth 4p x 2ea |
| | Report-Collector | <ul style="list-style-type: none">• Xeon silver 4210 2p 20c• 128GB MEM (32G x 4)• HDD 15k 600GB x 2ea (for OS, raid1)• NIC Onboard 1Gb eth 4p x 2ea |
